

RECHARGE

Post Exercise Supplement

RECHARGE is a post exercise supplement to be used within 30 minutes following work as an aid in recovering muscle glycogen and rid muscles of harmful lactic acid buildup. This product has been tested extensively in large fox hound kennels and sprint racing kennels with dogs running for hours and found to be extremely effective. If you don't notice immediate results (clearer urine and quicker response times) we will gladly refund with return of unused portion.

*RECHARGE is a post exercise supplement ONLY and NOT intended to override a well-balanced canine diet. Best used when exercising consecutive days; if a rest day is taken then consumption of **RECHARGE** is NOT NEEDED as the glycogen levels will return on their own to pre-workout levels.*

FEEDING INSTRUCTIONS: *To be fed with water (baited slightly or plain) within 30 minutes following work, at a rate of **2 heaping Tablespoons** per 50# of body weight OR mix at same rate for bulk watering. DO NOT mix with regular feed, as this will hinder the absorption of product. Main meals can be given within 30 minutes following consumption of **RECHARGE**.*

It has been noted that if given PRE-exercise (approximately 30 minutes prior) in amounts of one quarter; that energy levels have risen without compromising any 'sugar crash' or 'carbo' crash.

CONTAINS: *Maltose (Dextrins), dextrose, brewers yeast (B Vitamins) and electrolytes.*

*Made by **Adirondack Kennel** Boylston, New York. 315-408-7154 or **hounds@frontiernet.net***
